**Postgraduate Physician Assistant Program in Oncology**
The Postgraduate Physician Assistant Program in Oncology at MD Anderson is the only oncology postgraduate clinical training program for PAs in the country. The program spans 12 months and is designed to prepare licensed, certified PAs for a career in adult medical, surgical and radiation oncology. One to two applicants are accepted each year for this competitive training program.

**Physician Assistant Student Programs**
MD Anderson has affiliations with nearly 75 physician assistant programs from around the US to provide clinical electives for their students in various aspects of cancer care. We accept approximately 50 students each year for this rotation. In addition, we provide preceptorships for approximately 20 Baylor College of Medicine PA students during their preclinical education year as an introduction to clinical evaluation and assessment.

**Radiation Physics Fellowship**
We have an Advanced Radiation Physics Fellowship Program in Proton Therapy at UT MD Anderson Cancer Center. From 2009 to 2015, we have provided training to 8 fellows, who are now employed as clinical physicists in different radiation oncology departments in USA. I am attaching a brief description of the scope of our program.

**Spiritual Care**
MD Anderson Spiritual Care and Education trained 9 students in FY15, and 10 students in FY14; projected to train a minimum of 15 students in FY 16.
