GOALS

• Utilize sponsor monitoring follow-up letters and implement new tracking methods to ensure findings are collaboratively addressed in real-time.

• Refine existing workflows for SAE and deviation reporting to ensure accountability, accuracy, and adherence to reporting timelines.

• Optimize Principal Investigator (PI) involvement in operational and regulatory trial aspects through a revamped PI meeting format.

METHODS

• Develop a templated response to monitoring letters and a standardized tracking system to ensure thorough documentation and timely resolution of findings.

• Create a centralized SAE tracking system, thus promoting wider accessibility to documentation of safety events and follow-up reports.

• Streamline deviation workflows to ensure timely reporting. The workflow will also provide greater visibility to PIs and management staff throughout the reporting process.

Prior to the FDA audit, PI meetings prioritized patient reviews over regulatory issues, monitoring findings, and other operational items. We are working to improve the overall quality of trial management during PI meetings. This includes an increase in time spent with the study team, a more equitable review of operational aspects of the trial, and the rollout of a modified meeting minute template to emphasize operational items.

RESULTS

After fully implementing these changes, our plans to evaluate outcomes include:

• Routine checks of deviation and SAE reports to ensure adherence to reporting timelines.

• Compare the number of deviations reported to evaluate whether new monitoring workflows and tracking methods improve overall compliance.

• Survey study staff and Principal Investigators to assess familiarity with the operational aspects of the protocol and open action items.

LESSONS LEARNED

The need to continuously evaluate and adapt procedures based on the success of existing workflows.

The importance of centralization and standardization of tools to track all study related items, including safety events and deviations.

The need for consistent review of pending operational items during time with the PI.
