#### SIDNEY KIMMEL COMPREHENSIVE CANCER CENTER RESEARCH CONSORTIUM

## Background

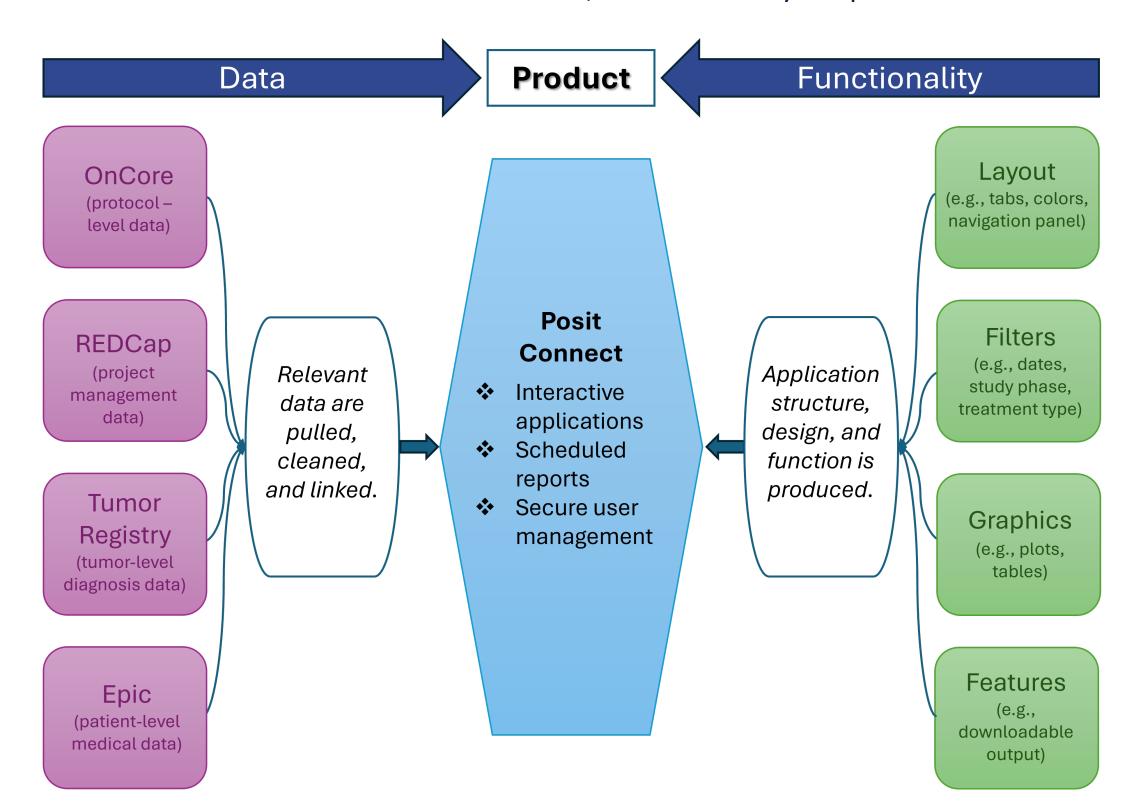

- Data-driven decision-making is essential across all phases of the clinical trial continuum within the Clinical Trial Organization (CTO).
- Access to structured, interpretable data that is readily available and tailored to specific tasks is, therefore, essential to the CTO.
- The SKCCC CTO team partnered with the Clinical Trial Analytics group to develop a suite of applications designed for use across CTO functions.

#### Goals

The goal of this initiative is to make relevant information readily available to CTO staff and leadership through a robust data analytics platform, allowing for self-service access to custom and frequently requested data that supports clinical trial efficiency and visibility across the clinical trial continuum.

### Methods

- CTO users submit requests for applications through a ticketing system.
- The CTA team reviews the request and meets with the CTO user to gain clarity and discuss priorities and options for meeting the request.
- Custom applications pull from multiple data sources and are published to Posit Connect as interactive websites, accessible only to specific users.

# **Example Applications Study Startup CTO Support** Reporting MDG Intake and Prioritization Accrual QC Accrual Self Service Monitors protocol progress through MDG approval process. #### **Conclusions & Future Directions**

- Streamlined Workflow: A new data product request workflow has enhanced communication between CTA and CTO teams.
- Widespread Use: 47 applications are now accessed ~100 times weekly by 78 CTO users across five departments.
- Improved Access: CTO teams now receive data in formats tailored to their reporting and monitoring needs.
- Efficiency Gains: Routine data requests have decreased, freeing time for higher-level collaborative work.
- Ongoing Development: Continued collaboration will focus on building tools that enhance metric tracking and analysis.
- Strategic Expansion: Future efforts will prioritize center-wide products that support broader cancer center goals.
