

## IN CASE YOU MISSED IT

### CRI Webinar: Implementing the Shared Investigator Platform

On June 18, AACI's **Clinical Research Innovation** (CRI) hosted a webinar in which members of AACI's Shared Investigator Platform (SIP) Task Force shared experiences and suggested workflows for the successful implementation of the SIP.

The webinar was moderated by **Hobs Apell**, senior executive director, Clinical Trials Office at The University of Kansas Cancer Center. Presenters included **Lindsay Casetta, CCRP**, quality assurance and education manager, Barbara Ann Karmanos Cancer Institute; **Jessica Moehle, CCRP**, director of operations, Clinical Trials Office, Huntsman Cancer Institute; and **Kendra Todd, MBA**, operations manager, OHSU Knight Cancer Institute.

**Lestter Cruz Serrano, MD**, medical affairs director, Cognizant Life Sciences—the company that developed the SIP—offered guidance for implementing the SIP platform.

In a Q&A session following the presentations, Dr. Serrano noted that some centers that are using the SIP have seen as much as a 50 percent reduction in the amount of time and effort required to complete feasibility questionnaires for trial sponsors. In addition, Cognizant has been considering the possibility of expanding the SIP capabilities to encompass investigator-initiated trials.
